

TEACHER EDUCATION: NEW INNOVATION IN TEACHING

*Dr. Meenakshi Sangwan

Abstract

Education plays a very vital role in a life. Today the world is changing so we have change the pattern of education also pattern. Old method of education is out off use now cramming the fact in child's mind is having no use so we have to search methods which can be develop with the help of technology which can give student maximum understanding of subjects. It is important to change the teaching methods of education. Teacher faces a lot of problem to interaction because of the old techniques in education. This articles discuss that the today's need to reinvention and new idea that make teaching methods more effective should be implemented.

Keywords: ICT, Internet, Innovations, Teaching Learning Environment.

Introduction

Some of the following methods to improve education system. Audio and Video Tools very innovative invention to make the class more interesting. When a teacher explain a lesson of history. Students are listening but it is not possible to memorize whole lesson. In that place we use the audio - video tools. It helps student to memorize lesson easily and his concept is clear because of visualization. Another Method, we can do that link our chapter to real world learning. Student is so energetic and fresh in classroom. He take interest in study. Relating real life situation, will make to easy and more understandable or easy to learn. Rudyard Kipling rightly said, "If History were taught in the form of stories. It would never be forgotten." You can also reinforcement of communication and let the student tell a story in a pictures using their imagination. Katrina M. Walsemann, (2010) directed an investigation on Integrated Schools, Segregated Curriculum: Effects of within School Segregation on Adolescent Health Behaviors and Educational Aspirations. The goal of the examination was to look at the degree to which inside school isolation, as estimated by unevenness in the circulation of Black and White teenagers crosswise over levels of the English educational programs (propelled arrangement worldwide baccalaureate respects, general, therapeutic, or no English), was related with smoking, drinking, and instructive yearnings, which past investigations found are identified with school racial/ethnic piece. Teaching Learning Environment

To perform a good study of a generative topic entails the person's action of visiting the region where the action occurred. This is for the purpose of bringing into the light thinking of the oppressed. Also, the application of thinking to the learning procedure through concentration on group communication among contestants is vital. This is because; through communication or interaction the participants are able to attain consciousness of reality, in addition expressing this reality fully.

Freire perceives formal schooling and also the educational system related to it as undesired. This is because he believes that it retards human growth as well as initiative. That is why Freire proposes opposing education methods, one being the practice of liberty, and the other domination. According to freire, education should raise political consciousness. The purpose of Freire's educational methodology is to subvert the oppressive regimes.

The methodology proposed by the author considers development as non-material and, therefore, perceives an individual as the chief contributor of nation development. Freire's notions of education appear rather selective. They do not attempt to articulate the vast richness of their opinions on issues regarding the collective personality of man's humanity.

Internet is a great boon in our life. It helps in every aspect s of life. It is a very large community which is using internet for pure education, but unfortunately we have also a large number of people including majority of youth & teenager using internet for social network such as Orkut, Facebook, Twitter Myspace etc. Social media/ Social Networking is one of the Technological foundation of Web 2.0 which allow people to create, share, exchange information and ideas in virtual communities and network s. It is the social interaction among people in which they can create share or exchange information.

The Nature of Social Networking Sites and Low Academic Performances Social networking sites as web-based services that allow individuals to: (1) construct a public or semipublic profile within a bounded system, (2) articulate a list of other users with whom they share a connection, and (3) view and traverse their list of connections and those made by others within the system.

For the past years, social networking has been very popular for people worldwide. Social networking is a great form of entertainment. It is like going to a new school, on your first day you have no friends but as days pass you will meet new friends and eventually you will form groups or circle of friends. At first, you don't have much interest in your new school but when you begin to learn and enjoy more about your school, you will be happy to spend much of your time in school with your friends, teachers and etc. It is open for all kinds of people, all ages, and all races. A purpose of social networking is we meet people, maybe people we met before like old classmates or schoolmate or new people from different races and countries, we just have same interests with.

Documents for Web Usage

The integration and adaptation of a large vary of internet resources are that the primary wants of the web usage systems. Internet resources square measure the text, video, pictures, graphics, etc., that have the potential to support learning. These internet resources square measure unremarkably organized sets of content developed by associate knowledgeable or specialist, providing data associated with a selected topic. The expansion of academic learning material on the online

necessitates finding document sources to suit learner wants. When finding appropriate document sources, there's a necessity to work out specific elements of documents that might be reused, and to outline the sequence within which the document components ought to be given. The provision of the many free e-books and open supply courseware has accumulated the gathering of documents offered for web usage. However, one issue that has to be solved before these mechanically created learning objects is commercially used, is that the question of authorship rights. within the work delineated during this study, documents at the side of authorship data where offered, and needed for learning object construction associated with the pc science domain, square measure religious residence downloaded. This work discusses a machine learning system which will learn topics at the education level mechanically to construct and annotate learning objects, from the documents.

Conclusion

Freire's view of traditional pedagogy as oppressive and the proposition of the learning concept based on "problem posing" are useful in transforming communities. His work, however, fails to discuss the significance of a teacher in his proposed concept. In addition, the author's work does not include the aspect gender, race and class and, therefore, open to criticism. The author discusses the issue of humanization and dehumanization; he asserts that oppressors thwart humanization through the injustice, violence and exploitation that they perpetuate. Freire's pedagogy is worth recognizing because of its ability transform individuals into thinkers able to fight for their liberation.
